

Dear Premium Customers,

**At least as important as knowing if you have become infected with SARS-CoV-2 – and in the medium term, the majority of us will be infected – is the knowledge of what complications can be expected in case of an infection. The Salvagene Covid-19 Risk Factor gives a very precise indication of your current status. It forecasts the probability of moderate or severe symptoms and subsequent complications in the course of the disease.**

## **The Salvagene Covid-19 Risk Factor is calculated by the Salvagene Artificial Intelligence Program (S.A.I.P.).**

S.A.I.P. is working steadily in the background to process the data we have on you and to collate it with international databases on Covid-19. It is important to note that the more data you provide, the more regularly it is collected and the more up-to-date it is, the more accurately S.A.I.P. can determine your personal Covid-19 risk factor. In contrast to the Salvagene GIX Score, which calculates the current level of spent health potential, the Salvagene Covid-19 Risk Factor also processes external data.

The algorithms mapped in S.A.I.P. have particularly high weightings in the following areas:

- the responsiveness of your immune system (i.e. underperforming? overperforming?)
- your cardiovascular levels
- your Silent Inflammation and Inflammaging levels
- your diabetes and blood pressure levels
- your current medication
- your detoxification capacity
- your allergy levels
- your genetics
- the epigenetic status of your inflammation genes
- your current vital substance and hormone levels
- your microbiome levels
- any malfunctions in the area of the thyroid gland
- any autoimmune responses
- current and past bacterial infections (Lyme's etc.)
- your immunosuppressive status
- your age (only with reference to the criteria mentioned above)

THIS PERSONAL DATA WILL BE COLLATED WITH DATA FROM EXTERNAL DATABASES IN THE FIELD OF EPIDEMIOLOGY AND VIROLOGY RELATING TO COVID-19

To ascertain your current Covid-19 Risk Factor, please contact your Salvagene consultant

Calculation of Covid-19 Risk Factor is free of charge for premium customers.

To reduce your Covid-19 Risk Factor, please follow our recommendations, in particular as they relate to the intake of your personal inflammation inhibitors.
